

RURAL HEALTH TRANSFORMATION PROGRAM

We build the systems behind rural health transformation initiatives

Your state promised specific, scored technology outcomes to win this money. The clock is running, CMS rescoring every year, and rural organizations do not carry engineering benches. **Digital Scientists is the team that designs and builds those systems.**

A licensed provider, one button away. That is what this money is buying.

All 50 states are funded

\$10 billion obligated for FY2026, and 471 subawards already reported to subrecipients.

WHAT WE BUILD

F.1

Remote care services

Provider on demand at the point of care. State-by-state licensure, escalation paths, and documentation that survives an audit.

C.2

EMS and treat in place

The same mechanic your state wrote into its application, built to your medical direction rather than ours.

F.2

Data infrastructure

Health information exchange onboarding, identity matching and EHR integration. PointClickCare and Gehrimed live in production.

F.3

Consumer-facing technology

Devices people actually use. Passwordless, no learning curve, designed for older adults and people with IDD.

C.1

Multi-tenant platforms

One solution funded once and used by every organization in a region, each keeping its own data isolation and reporting.

WHY US

We have built one

Not a reference architecture. A rural virtual care platform we designed, shipped and still operate every day.

We integrate, not replace

Your EHR, your vendors, your clinicians. Technology agnostic is a scored requirement, not a sales posture.

You own the result

Code, intellectual property and roadmap yours from the first commit. Anything rented stops working in 2030.

HEALTHCARE ORGANIZATIONS WE HAVE BUILT FOR

OUR PLATFORM · PROOF, AND A PRODUCT YOU CAN LICENSE

We did not just design NeverAlone. We run it.

A 24/7 clinical safety net for senior and post-acute care teams. A resident, caregiver or staff member presses one button on a purpose-built device and reaches a licensed provider in minutes.

It is the proof of what we can build for you, and it is separately available as a licensed commercial product, onboarding in under two weeks and available in a growing list of states.

The NeverAlone device at the bedside, mid-call with a licensed provider.

26,000+

Patients supported

100,000+

Calls a year, three years

130+

Facilities, 7 states

96%

Treated in place

LICENSE IT WITH OUR CLINICIANS, YOURS, OR BOTH

Our provider network

Credentialed in the states we serve, including behavioral health.

Or your own

Runs on your network. No outsourcing your clinicians.

Or both

Yours by day, ours overnight and at weekends.

HOW TO START, AND HOW IT IS PAID FOR

01

A conversation

Your scope, and where the risk sits. A readiness review follows if it helps.

No cost

02

Working Session

Map scope, pick a start.

Use D

03

Blueprint

Architecture, plan, budget.

Use D

04

Build and operate

Engineering, then support.

Fundable

Training and technical assistance is an approved use of funds, so planning and architecture come out of the award.

The grant builds it. Something else has to run it after 2030, and we name that before you sign.

Since 2007

Senior US team, Fortune 10 to startups, from our studio in Alpharetta, Georgia.

Built for PHI

HIPAA compliant in production, on AWS
HIPAA-eligible services under a business associate agreement.
